# Installation Manual

# PawsomeVet Website & Clinic Management System

Kayneth Marie Calica - K221516

Laurence Mello - K210366

Malgorzata Mika - K220251

Julius Urblik - K210696

# Summary

The following shows how to set up the system in detail along with the functionalities implemented.

## **Table of Contents**

#### **Summary**

**Table of Contents** 

Setting up the system locally

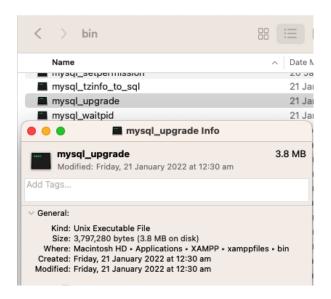

- 1. System Requirements
- 2. Clone code from remote repository
- 3. Setting up the database
- 4. Setting up the user interface
- 5. Running the user interface

Optional: API Testing

# Setting up the system locally

### 1. System Requirements

a. XAMPP v8.1.2, run mysql\_upgrade

- b. NodeJS v19.6.0
- c. PHP v8.2.9
- d. Git v2.41.0
- e. Google Chrome/Mozilla Firefox/Safari

#### Optional:

- f. MySQL Workbench v8.0
- g. Visual Studio Code v1.73
- h. IntelliJ v2023.1.4 Ultimate Edition
- i. Insomnia v2023.5.8
- j. GitHub Desktop v3.2.9

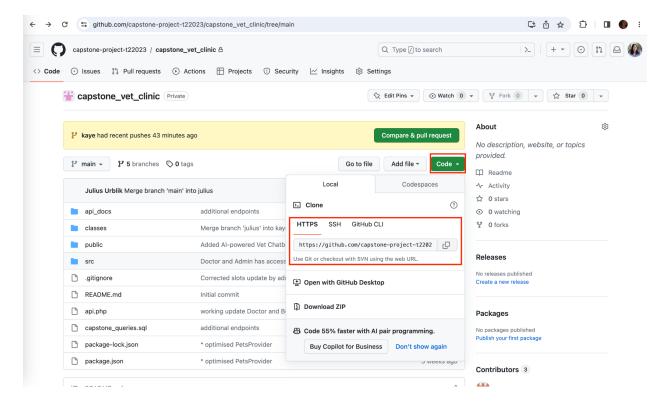

## 2. Clone code from remote repository

a. Log in or create GitHub account

<sup>\*\*\*</sup>versions may vary per local machine

<sup>\*\*\*</sup>this is based on an arm64-based machine

b. The repository is private so make sure to ask permission from owners. Use GitHub link: https://github.com/capstone-project-t22023/capstone\_vet\_clinic/tree/main

- c. To clone a repository, you can clone using the terminal or the GitHub Desktop GUI.
  - i. Terminal

Execute inside XAMPP's htdocs folder:

git clone https://github.com/capstone-project-t22023/capstone\_vet\_clinic.git

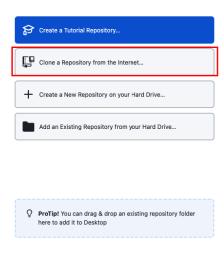

To check and switch branches:

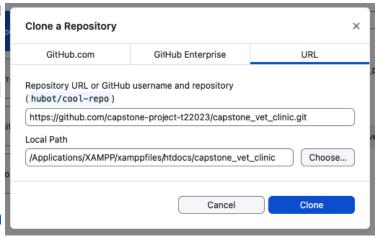

- Kayes-MBP:capstone\_vet\_clinic kayecalica\$ git branch kaye
  - \* main
- Kayes-MBP:capstone\_vet\_clinic kayecalica\$ git checkout kaye Switched to branch 'kaye' Your branch is up to date with 'origin/kaye'.
- Kayes-MBP:capstone\_vet\_clinic kayecalica\$ git branch
  - \* kaye main
- Kayes-MBP:capstone\_vet\_clinic kayecalica\$ git pull Already up to date.
- Kayes-MBP:capstone\_vet\_clinic kayecalica\$
  - ii. GitHub Desktop GUI

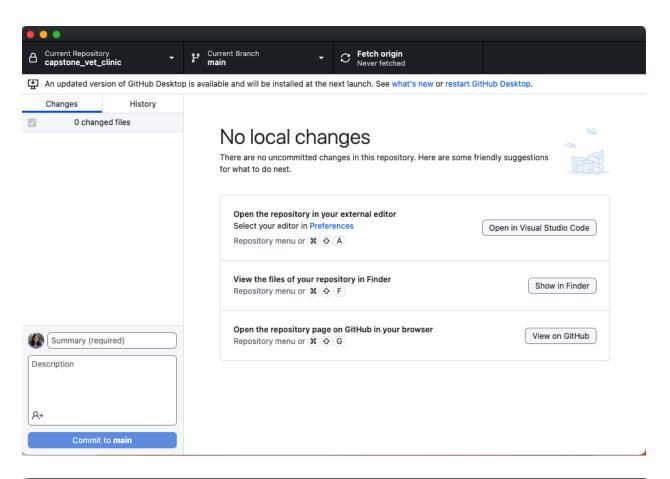

Let's get started!

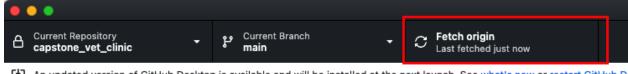

000

Add a repository to GitHub Desktop to start collaborating

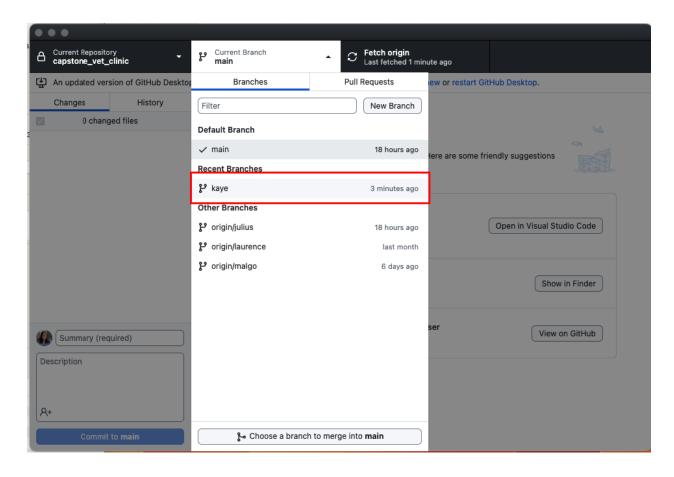

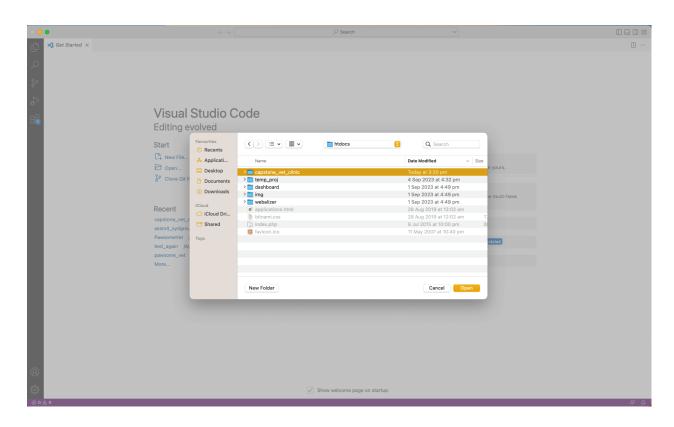

An updated version of GitHub Desktop is available and will be installed at the next launch. See what's new or restart GitHub D

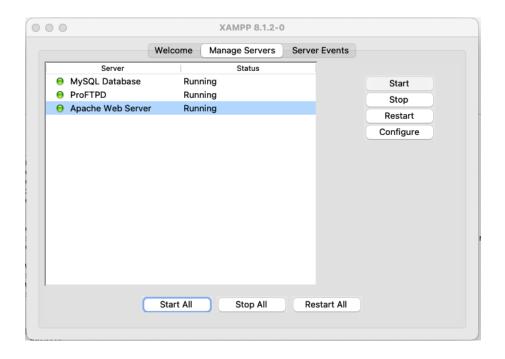

d. Open the code in the IDE of your choice

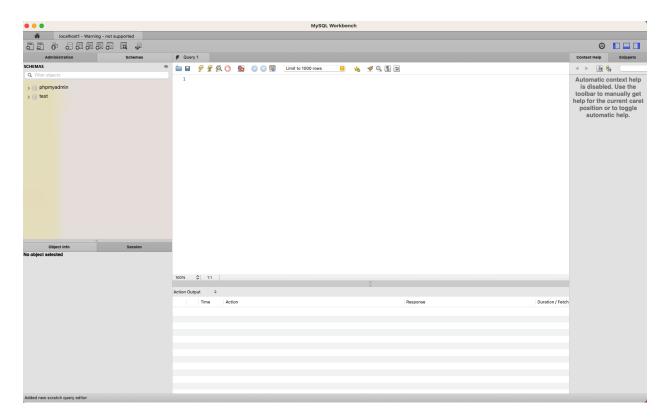

## 3. Setting up the database

#### a. Run XAMPP

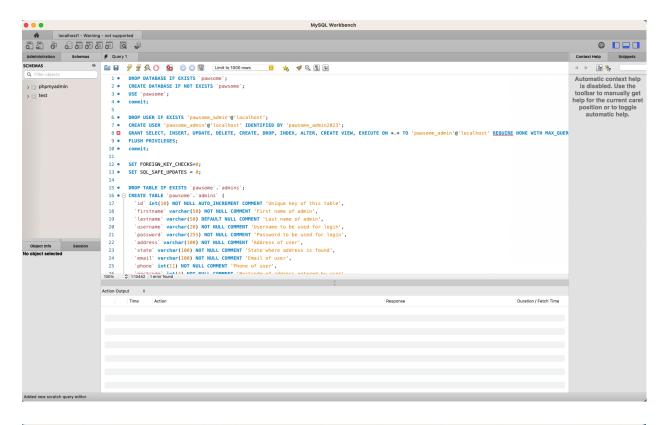

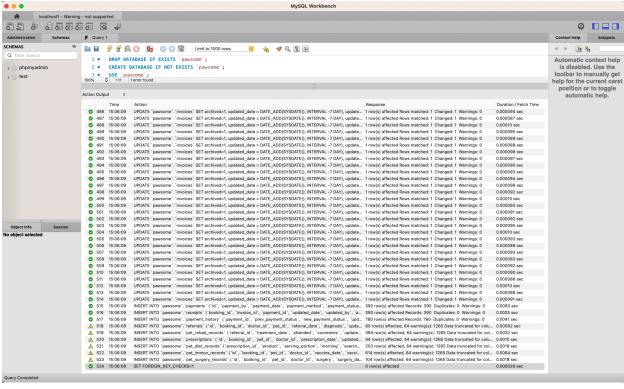

b. Open <a href="http://localhost/phpmyadmin/index.php">http://localhost/phpmyadmin/index.php</a> in the browser or use MySQL Workbench.

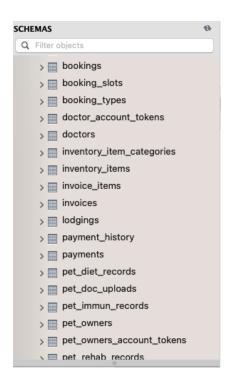

c. Copy the queries in the capstone\_queries.sql file and paste

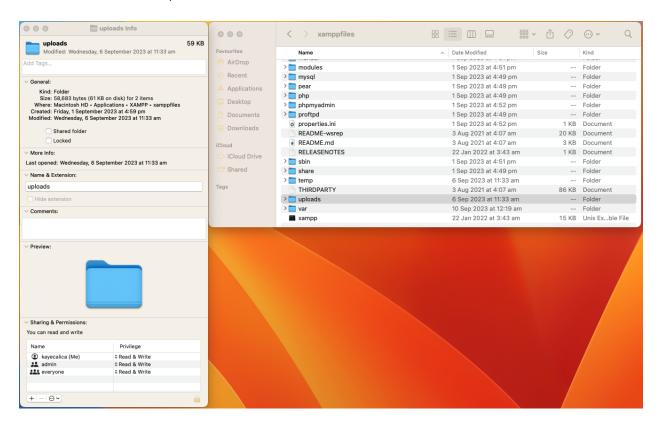

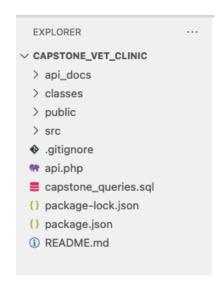

d. Create an uploads folder inside xamppfiles folder where uploads and downloads will take place

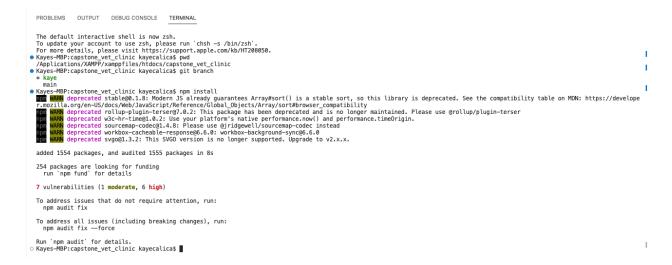

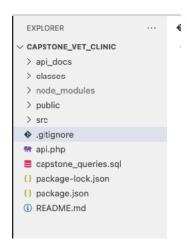

#### 4. Setting up the user interface

a. Check if cloned code structure is complete

b. Execute to install React libraries, node\_modules should appear after this command: npm install

## 5. Running the user interface

a. Execute to run application: npm start

```

To address all issues (including breaking changes), run: npm audit fix —-force

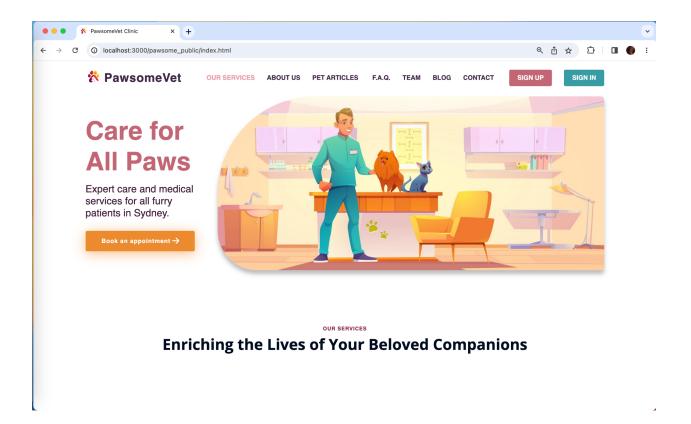

Run `npm audit` for details.

Kayes—MBP:capstone_vet_clinic kayecalica$ npm start
```

Starting the development server...

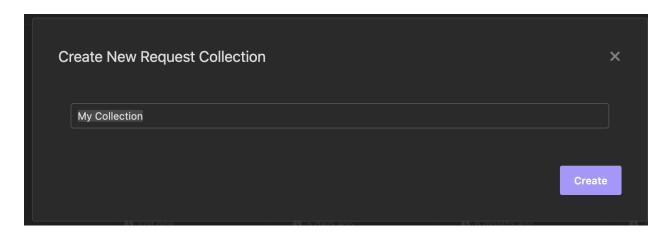

One of your dependencies, babel-preset-react-app, is importing the "@babel/plugin-proposal-private-property-in-object" package without declaring it in its dependencies. This is currently working because "@babel/plugin-proposal-private-property-in-object" is already in your node\_modules folder for unrelated reasons, but it may break at any time.

babel-preset-react-app is part of the create-react-app project, which is not maintianed anymore. It is thus unlikely that this bug will ever be fixed. Add "@babel/plugin-proposal-private-property-in-object" to your devDependencies to work around this error. This will make this message go away.

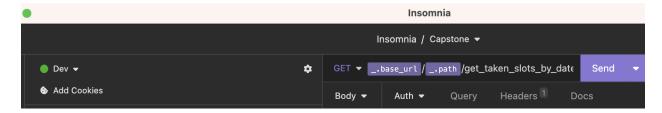

# Optional: API Testing

- 1. Download and install Insomnia
- 2. Make sure application is running
- 3. Open Insomnia and add a Collection

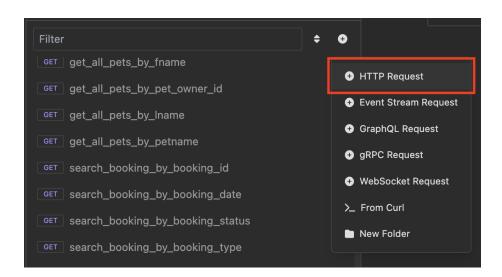

4. Setup environment/s. In this case, only Dev environment is present. In production, there can be production/staging environments.

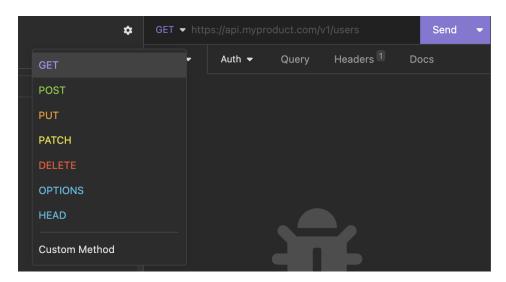

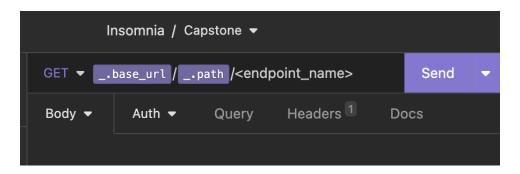

5. Add new HTTP Request.

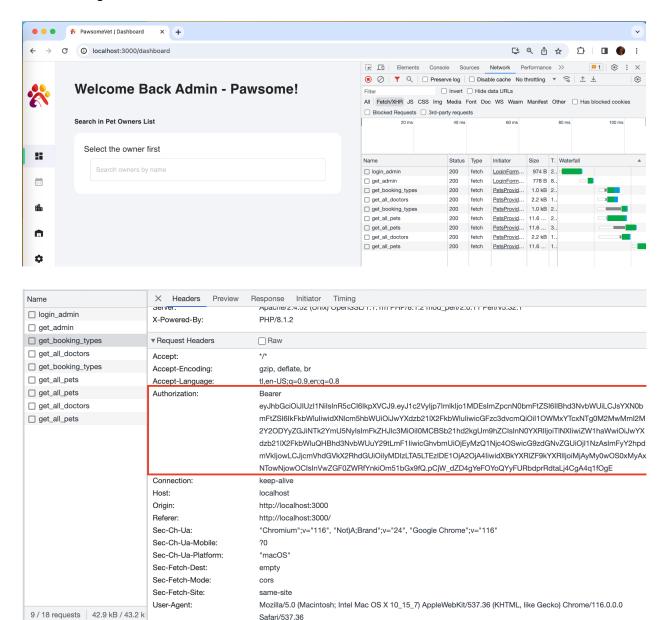

6. Choose the type of request. Usual types include GET, POST, PUT, and DELETE.

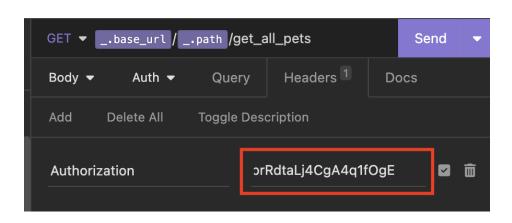

7. Complete the fetch URL to be executed. Provide the endpoint name.

8. Get Authorization token to be sent with the request. Once logged in, go to Network tab and get Authorization header.

9. Add to the Insomnia request header

#### 10. Hit Send to test out API endpoint
